

Tricks

Allow everything what can be a str reference

```
fn do_something<S: AsRef<str>>(input: S) {  
    let input_str = input.as_ref();  
    println!("This is a &str: {}", input_str);  
}  
  
do_something("Hello World");  
do_something("Hello World".to_string());
```
